ELSEVIER

Computer Communications 25 (2002) 1815–1831

computer communications

www.elsevier.com/locate/comcom

Subject Index of Volume 25

ABR flow control
ABR traffic management using minimal resource allocation (neural) networks 9
ABR traffic
A simple ER identification with congestion avoidance (SERICA) algorithm to support some TCP differentiated services over the ABR traffic 445
Access control
Security architecture testing using IDS—a case study 1402
Active code
Realization of a secure active and programmable network infrastructure via mobile agent technology 1465
Active networks
An extension of the *ns* simulator for active network research 189
Realization of a secure active and programmable network infrastructure via mobile agent technology 1465
Active Queue Management (AQM)
Multi-level active queue management with dynamic thresholds 756
Design of a fuzzy controller for active queue management 874
A linear system analysis of RED 1736
Ad hoc networking
An efficient multiple-path routing protocol for ad hoc networks 478
Ad hoc networks
Investigating the performance of TCP in mobile ad hoc networks 1132
Adaptive multimedia
Bandwidth degradation QoS provisioning for adaptive multimedia in wireless/mobile networks 1153
Add/drop multiplexer
Traffic grooming in unidirectional WDM ring networks using genetic algorithms 1185
Additive constraints
An efficient algorithm for finding a path subject to two additive constraints 225
Agent execution environment
ICALB: an integrated congestion avoidance and load balancing algorithm for distributed intelligent networks. Part I: description of ICALB 1548
ICALB: an integrated congestion avoidance and load balancing algorithm for distributed intelligent networks. Part II: Performance evaluation of ICALB 1564
Aggregated bandwidth allocation
Aggregated bandwidth allocation: investigation of performance of classical constrained and genetic algorithm based optimisation techniques 1443
Aggregation scheme
Adaptive crankback schemes for hierarchical QoS routing in ATM networks 534
Algorithm
A new approach for delay-constrained routing 1751
All-optical networks
A restoration method independent of failure location in all-optical networks 915
Allowable cell rate
A performance prediction model for FECN rate-based flow control in ATM networks: a case study 1323
ALOHA
Power level selection schemes to improve throughput and stability of slotted ALOHA under heavy load 1719
Alternate routing
Performance analysis of alternate routing with trunk reservation in multirate switched networks 1665
Application specific networks
Automated design of hierarchical intranets 1066
Arbitration
Design and analysis of enhanced Abacus switch 577
Asymmetric digital subscriber loop
TCP performance analysis and optimization over DMT based ADSL system 322
Asymmetric networks
Accurate bandwidth measurement in xDSL service networks 1699
Asynchronous remote procedure call
A reliable asynchronous RPC architecture for wireless networks 1631
Asynchronous transfer mode
A methodology for developing simulation models of ATM networks in SDL language 265
Threshold-based congestion control scheme for ABR services in ATM networks 652
Design of a new globally stable explicit rate controller for ABR service with saturation 772
Fair flow control for ATM-ABR multipoint connections 741
Asynchronous Transfer Mode networks
A performance prediction model for FECN rate-based flow control in ATM networks: a case study 1323
A new state space control scheme for Host-Gate Way Rate Control Protocol within intranets using ATM ABR service 1799

PII: S0140-3664(02)00231-1

ATM
MCoRe: an adaptive scheme for rerouting multicast connections in mobile ATM networks 56
A QoS-based routing algorithm for PNNI ATM networks 714
BFRA: bounded flooding routing algorithm for provisioning the globally optimal route in a hierarchical ATM network 980
A cell loss upper bound for heterogeneous ON–OFF sources with application to connection admission control 1172
ATM adaptation layer 2 (AAL2)
Performance analysis of wireless ATM/AAL2 over a burst error channel 1
ATM Adaptation Layer 5
An implementation for ATM Adaptation Layer 5 1103
ATM networks
A simple ER identification with congestion avoidance (SERICA) algorithm to support some TCP differentiated services over the ABR traffic 445
Design of survivable WDM networks for carrying ATM traffic 485
Performance evaluation of resource reservation and call admission policies for deterministic services in PGPS-based packet networks 1513
ATM traffic shaping
Accurate bandwidth measurement in xDSL service networks 1699
ATM VP optimal route provision
BFRA: bounded flooding routing algorithm for provisioning the globally optimal route in a hierarchical ATM network 980
ATM/IP integration
A scalable parallel internet router that enables the QoS through merging ATM with IPv6 647
Automatic call gapping
ICALB: an integrated congestion avoidance and load balancing algorithm for distributed intelligent networks. Part I: description of ICALB 1548
ICALB: an integrated congestion avoidance and load balancing algorithm for distributed intelligent networks. Part II: Performance evaluation of ICALB 1564
Autoregressive Gaussian processes with aggregations
Using autoregressive Gaussian processes with trends and aggregations to model self-similar traffic 964
Autoregressive Gaussian processes with trends
Using autoregressive Gaussian processes with trends and aggregations to model self-similar traffic 964
Available bit rate
Threshold-based congestion control scheme for ABR services in ATM networks 652
Fair flow control for ATM-ABR multipoint connections 741
Design of a new globally stable explicit rate controller for ABR service with saturation 772
Available Bit Rate service
A new state space control scheme for Host-Gate Way Rate Control Protocol within intranets using ATM ABR service 1799
Available bit rate services
A performance prediction model for FECN rate-based flow control in ATM networks: a case study 1323
Backup multiplexing
A note on dependable real-time communication in multihop networks 1673
Bandwidth
Hop-by-hop versus end-to-end active measurements 954
Optimal branching factor for tree-based reliable multicast protocols 1018
Bandwidth adaptation
Bandwidth degradation QoS provisioning for adaptive multimedia in wireless/mobile networks 1153
Bandwidth Allocation algorithms
Fair flow control for ATM-ABR multipoint connections 741
Bandwidth control
Bandwidth allocation in a multiservice satellite network based on long-term weather forecast scenarios 1037
Bandwidth measurement
Accurate bandwidth measurement in xDSL service networks 1699
Bandwidth renegotiation
The transportation of VBR-encoded video using deterministic characterization and bandwidth renegotiation 731
Bandwidth reservation
An efficient bandwidth reservation and call admission control scheme for wireless mobile networks 74
Bandwidth-guaranteed path selection
Non-greedy minimum interference routing algorithm for bandwidth-guaranteed flows 1640
Batch patching
Joint server scheduling and proxy caching for video delivery 413
Bluetooth
Trends in personal wireless data communications 84
BM (bandwidth manager)
A review of quality of service mechanisms in IP-based networks — integrated and differentiated services, multi-layer switching, MPLS and traffic engineering 100
Branching factor
Optimal branching factor for tree-based reliable multicast protocols 1018
Browser trace
Thin-client Web access patterns: Measurements from a cache-busting proxy 357
Buffer allocation
TCP rate control with dynamic buffer sharing 922
Buffer management
Multi-level active queue management with dynamic thresholds 756
TCP rate control with dynamic buffer sharing 922
Weighted fair discard scheme for buffer management in the presence of network congestion 944
Buffer-bandwidth tradeoff curve
Packet multiplexers with adversarial regulated traffic 239

Bufferless fluid flow model
A cell loss upper bound for heterogeneous ON–OFF sources with application to connection admission control 1172
Burst errors
Performance analysis of wireless ATM/AAL2 over a burst error channel 1
Bypass pointers
A Track-Presetting strategy in PCS using hierarchical location databases 1727

Cache simulation
Thin-client Web access patterns: Measurements from a cache-busting proxy 357
***Cache* strategy**
A Track-Presetting strategy in PCS using hierarchical location databases 1727
Caching
Replica-aware caching for Web proxies 183
Call admission control
An efficient bandwidth reservation and call admission control scheme for wireless mobile networks 74
Packet multiplexers with adversarial regulated traffic 239
Call admission control for reducing dropped calls in CDMA cellular systems 689
Mobility-dependent call admission control in hierarchical cellular networks 700
Call admission control for voice and data traffic in wireless communications 972
Bandwidth degradation QoS provisioning for adaptive multimedia in wireless/mobile networks 1153
Performance evaluation of resource reservation and call admission policies for deterministic services in PGPS-based packet networks 1513
Split-connection rearrangeably nonblocking operation of three-stage multirate Clos networks 1584
Joint call admission control/congestion control for wireless integrated voice/data networks 1653
Call blocked
Single channel occupied voice and multi-channel occupied HSCSD over GSM 522
Call blocking probability
Joint call admission control/congestion control for wireless integrated voice/data networks 1653
Call delivery
Evaluating location management schemes for third generation mobile networks 1711
Call rejection
Single channel occupied voice and multi-channel occupied HSCSD over GSM 522
Call-to-Mobility Ratio (CMR)
A Track-Presetting strategy in PCS using hierarchical location databases 1727
CAMAD for networks
QUIPS-II: a simulation tool for the design and performance evaluation of Diffserv-based networks 1125
Carrier sense multiple access with collision avoidance
CSMA/CA performance under high traffic conditions: throughput and delay analysis 313
CATV networks
A novel mechanism for providing service differentiation over CATV network 1214
Causally ordered delivery
Causally ordered delivery of multimedia objects 437
Cell assignment
A tabu search approach for assigning cells to switches in cellular mobile networks 464
A genetic algorithm for solving dual-homing cell assignment problem of the two-level wireless ATM network 1536
Cellular network
Channel-sharing strategies in two-tier cellular PCS systems 1333
Cellular networks
A tabu search approach for assigning cells to switches in cellular mobile networks 464
Channel management
Dynamic channel allocation with location awareness for multi-hop mobile ad hoc networks 676
Channel-sharing strategies in two-tier cellular PCS systems 1333
Channel utilization
Joint call admission control/congestion control for wireless integrated voice/data networks 1653
Classical constrained optimisation
Aggregated bandwidth allocation: investigation of performance of classical constrained and genetic algorithm based optimisation techniques 1443
Classless interdomain routing
High-performance IP routing table lookup 303
Client trace
Thin-client Web access patterns: Measurements from a cache-busting proxy 357
Code-division multiple access
Call admission control for reducing dropped calls in CDMA cellular systems 689
Performance analysis for voice/data integration on a CDMA-based wireless system 905
Common object request broker architecture
ICALB: an integrated congestion avoidance and load balancing algorithm for distributed intelligent networks. Part I: description of ICALB 1548
ICALB: an integrated congestion avoidance and load balancing algorithm for distributed intelligent networks. Part II: Performance evaluation of ICALB 1564
Communication protocol
Dynamic channel allocation with location awareness for multi-hop mobile ad hoc networks 676
Computer Networking
Terabit switching: a survey of techniques and current products 547
Computer security
Design and implementation of a decentralized prototype system for detecting distributed attacks 1374
Intrusion detection with mobile agents 1392
Computer-aided design
Automated design of hierarchical intranets 1066
Concurrency
The Cyclone Server Architecture: streamlining delivery of popular content 403

Conformance testing
Conformance testing to real-time communications systems 32
Congestion avoidance
ICALB: an integrated congestion avoidance and load balancing algorithm for distributed intelligent networks. Part I: description of ICALB 1548
ICALB: an integrated congestion avoidance and load balancing algorithm for distributed intelligent networks. Part II: Performance evaluation of ICALB 1564
Congestion Control
Threshold-based congestion control scheme for ABR services in ATM networks 652
Multi-level active queue management with dynamic thresholds 756
Design of a fuzzy controller for active queue management 874
TCP rate control with dynamic buffer sharing 922
Joint call admission control/congestion control for wireless integrated voice/data networks 1653
A linear system analysis of RED 1736
Performance comparison between TCP Reno and TCP Vegas 1765
Congestion Control Algorithms
Fair flow control for ATM-ABR multipoint connections 741
Connection admission control
Resource allocation rules for providing performance guarantees to traffic aggregates in a DiffServ environment 846
Connection rerouting
MCoRe: an adaptive scheme for rerouting multicast connections in mobile ATM networks 56
Constrained optimisation genetic algorithms
Aggregated bandwidth allocation: investigation of performance of classical constrained and genetic algorithm based optimisation techniques 1443
Constrained shortest path first
Minimizing re-routing in MPLS networks with preemption-aware constraint-based routing 1076
Content distribution
The potential costs and benefits of long-term prefetching for content distribution 367
Content Distribution Internetworking (CDI)
CDN brokering 393
Content distribution network
Topology-informed Internet replica placement 384
Content Distribution Networks (CDN)
Object replication strategies in content distribution networks 376
CDN brokering 393
Joint server scheduling and proxy caching for video delivery 413
An interactive video delivery and caching system using video summarization 424
Control theory
A linear system analysis of RED 1736
Cooperation
Object replication strategies in content distribution networks 376
Cooperative agents
An intelligent routing and CAC framework for large-scale networks based on cooperative agents 1429
Coordination with feedback
Optimization network flow control and price coordination with feedback: proposal of a new distributed algorithm 1028
CORBA
Current status and future directions of software architectures for telecommunications 121
The CORBA-based unified event management framework in multi-layer networks 254
Core-based trees
Real-time optimal multicast routing 1297
Crankback
Adaptive crankback schemes for hierarchical QoS routing in ATM networks 534
Crossover switch
Rerouting for handoff based on the distance in wireless ATM networks 1162

Data discard
Weighted fair discard scheme for buffer management in the presence of network congestion 944
Data rate
Data rate improvement with dynamic reassignment of spreading codes for DS-CDMA 1575
Data-over-cable service interface specifications
A novel mechanism for providing service differentiation over CATV network 1214
Decentralized intrusion detection
Design and implementation of a decentralized prototype system for detecting distributed attacks 1374
Defence capability
Security architecture testing using IDS—a case study 1402
Delay
Effect of delay and delay jitter on voice/video over IP 863
Delay bounded routing
A distributed routing and wavelength assignment algorithm for real-time multicast in WDM networks 1527
Delay bounds
A probabilistic priority scheduling discipline for multi-service networks 1243
A multi-class probabilistic priority scheduling discipline for differentiated services networks 1487
Delay differentiation
Packet scheduling with delay and loss differentiation 21
Delay jitter
Dynamical grouping model for distributed real time causal ordering 288
Effect of delay and delay jitter on voice/video over IP 863
Delay variation
A fast and efficient heuristic algorithm for the delay- and delay variation-bounded multicast tree problem 825
Delay-constrained routing
A new approach for delay-constrained routing 1751
Delayless subband AEC
Multipoint communications with speech mixing over IP network 46

Delta-causality order
Dynamical grouping model for distributed real time causal ordering 288
Dependability
GORA: an algorithm for designing optical cross-connect nodes with improved dependability 1454
Dependable channels
A note on dependable real-time communication in multihop networks 1673
Dependent calls arrival processes
Performance analysis of a PCS network with state dependent calls arrival processes and impatient calls 507
Design of algorithm
A genetic algorithm for solving dual-homing cell assignment problem of the two-level wireless ATM network 1536
Deterministic characterization
The transportation of VBR-encoded video using deterministic characterization and bandwidth renegotiation 731
Deterministic services
Performance evaluation of resource reservation and call admission policies for deterministic services in PGPS-based packet networks 1513
Differentiated services (DiffServ)
Packet scheduling with delay and loss differentiation 21
A review of quality of service mechanisms in IP-based networks — integrated and differentiated services, multi-layer switching, MPLS and traffic engineering 100
A simple ER identification with congestion avoidance (SERICA) algorithm to support some TCP differentiated services over the ABR traffic 445
QUIPS-II: a simulation tool for the design and performance evaluation of Diffserv-based networks 1125
Performance evaluation of a Linux DiffServ implementation 1195
A multi-class probabilistic priority scheduling discipline for differentiated services networks 1487
An efficient bandwidth management scheme for real-time Internet applications 1596
DiffServ
Resource allocation rules for providing performance guarantees to traffic aggregates in a DiffServ environment 846
Digital fountain
The Cyclone Server Architecture: streamlining delivery of popular content 403
Discrete multi-tone
TCP performance analysis and optimization over DMT based ADSL system 322
Distance factor
Rerouting for handoff based on the distance in wireless ATM networks 1162
Distance vector multicast routing protocol
Performance analysis of multicast algorithms for mobile satellite communication networks 1085
Distributed computing environment
Design and implementation of a distributed computing environment model for object-oriented networks programming 516
Distributed coordination function
CSMA/CA performance under high traffic conditions: throughput and delay analysis 313
Distributed pricing
Optimization network flow control and price coordination with feedback: proposal of a new distributed algorithm 1028
Distributed processing environment
ICALB: an integrated congestion avoidance and load balancing algorithm for distributed intelligent networks. Part I: description of ICALB 1548
ICALB: an integrated congestion avoidance and load balancing algorithm for distributed intelligent networks. Part II: Performance evaluation of ICALB 1564
Distributed system reliability
A fast algorithm for reliability-oriented task assignment in a distributed system 1622
Distributed systems
Causally ordered delivery of multimedia objects 437
The globe infrastructure directory service 835
A built-in memory model for reducing location update cost in mobile wireless networks 1343
DLB
Resource allocation rules for providing performance guarantees to traffic aggregates in a DiffServ environment 846
Domain Name System (DNS)
CDN brokering 393
DS-CDMA
Data rate improvement with dynamic reassignment of spreading codes for DS-CDMA 1575
Dual-homing
A genetic algorithm for solving dual-homing cell assignment problem of the two-level wireless ATM network 1536
Duplicate suppression
Thin-client Web access patterns: Measurements from a cache-busting proxy 357
Dynamic code reassignment
Data rate improvement with dynamic reassignment of spreading codes for DS-CDMA 1575
Dynamic events
Modeling with enhanced prioritized Petri nets: EP-nets 812
Dynamic routing
An efficient multiple-path routing protocol for ad hoc networks 478

Edge device
Decoupling different time scales of network QoS systems 1047
Elastic Round Robin
Low-latency guaranteed-rate scheduling using Elastic Round Robin 1315
End-to-end delay
A fast and efficient heuristic algorithm for the delay- and delay variation-bounded multicast tree problem 825
A new approach for delay-constrained routing 1751
End-to-end guarantee
An efficient bandwidth management scheme for real-time Internet applications 1596

End-to-end real-time video
Predictive flow control for TCP-friendly end-to-end real-time video on the Internet 1230
Energy-efficiency
Crash faults identification in wireless sensor networks 1273
Enhanced P-Net
Modeling with enhanced prioritized Petri nets: EP-nets 812
ER-based switch algorithm
A simple ER identification with congestion avoidance (SERICA) algorithm to support some TCP differentiated services over the ABR traffic 445
ERICA
ABR traffic management using minimal resource allocation (neural) networks 9
Event management
The CORBA-based unified event management framework in multi-layer networks 254
Exchange protocols
An intensive survey of fair non-repudiation protocols 1606
Expedited forwarding
An efficient bandwidth management scheme for real-time Internet applications 1596
Explicit rate
Design of a new globally stable explicit rate controller for ABR service with saturation 772

Factorial design
Investigating the performance of TCP in mobile ad hoc networks 1132
Fade
Bandwidth allocation in a multiservice satellite network based on long-term weather forecast scenarios 1037
Fading
Temporal difference method-based multi-step ahead prediction of long term deep fading in mobile networks 1477
Fair queuing
Low-latency guaranteed-rate scheduling using Elastic Round Robin 1315
Fairness
Fair flow control for ATM-ABR multipoint connections 741
Fault diagnosis
Crash faults identification in wireless sensor networks 1273
Fault resilience
Enabling fault resilience for web services 198
FEC
The Cyclone Server Architecture: streamlining delivery of popular content 403
Firewall configuration
Security architecture testing using IDS—a case study 1402
Fixed-point iteration
Call admission control for reducing dropped calls in CDMA cellular systems 689
Flow Control
Design of a fuzzy controller for active queue management 874
Flow optimization
Optimization network flow control and price coordination with feedback: proposal of a new distributed algorithm 1028
Flow/congestion control
Predictive flow control for TCP-friendly end-to-end real-time video on the Internet 1230
Forced termination probability
Mobility-dependent call admission control in hierarchical cellular networks 700
Forward explicit congestion notification flow control
A performance prediction model for FECN rate-based flow control in ATM networks: a case study 1323
Foundation for intelligent physical agents
Network resource brokerage by means of distributed agent-based systems encompassing reinforcement learning schemes 1415
Fractional Brownian motion
Token bucket characterization of long-range dependent traffic 1009
Fuzzy logic
An intelligent routing and CAC framework for large-scale networks based on cooperative agents 1429
Fuzzy Logic Control
Design of a fuzzy controller for active queue management 874

Genetic algorithm
Automated design of hierarchical intranets 1066
Traffic grooming in unidirectional WDM ring networks using genetic algorithms 1185
A genetic algorithm for solving dual-homing cell assignment problem of the two-level wireless ATM network 1536
Genetic algorithms
An intelligent routing and CAC framework for large-scale networks based on cooperative agents 1429
GORA: an algorithm for designing optical cross-connect nodes with improved dependability 1454
Gigabit Routers
Terabit switching: a survey of techniques and current products 547
Gilbert–Elliott model
Performance analysis of wireless ATM/AAL2 over a burst error channel 1
GPRS
Effect of TCP/LLC protocol interaction in GPRS networks 501
Graphical warning interface
Building agents for rule-based intrusion detection system 1366
Group communication
Causally ordered delivery of multimedia objects 437
Group communication systems
Dynamical grouping model for distributed real time causal ordering 288

GSM
Trends in personal wireless data communications 84
Effect of TCP/LLC protocol interaction in GPRS networks 501
Single channel occupied voice and multi-channel occupied HSCSD over GSM 522
Guaranteed-rate scheduling
Low-latency guaranteed-rate scheduling using Elastic Round Robin 1315

Handoff
An efficient bandwidth reservation and call admission control scheme for wireless mobile networks 74
Improving TCP handoff performance in Mobile IP based networks 635
Rerouting for handoff based on the distance in wireless ATM networks 1162
Handover
A hybrid handover scheme for integrated networks 1263
Headend scheduling
A novel mechanism for providing service differentiation over CATV network 1214
Heavy load
Power level selection schemes to improve throughput and stability of slotted ALOHA under heavy load 1719
Heuristic algorithm
A novel cache distribution heuristic algorithm for a mesh of caches and its performance evaluation 329
A fast and efficient heuristic algorithm for the delay- and delay variation-bounded multicast tree problem 825
A fast algorithm for reliability-oriented task assignment in a distributed system 1622
Heuristic methods
A tabu search approach for assigning cells to switches in cellular mobile networks 464
Hierarchical network
Mobility-dependent call admission control in hierarchical cellular networks 700
Hierarchical network management
BFRA: bounded flooding routing algorithm for provisioning the globally optimal route in a hierarchical ATM network 980
Hierarchical QoS routing
BFRA: bounded flooding routing algorithm for provisioning the globally optimal route in a hierarchical ATM network 980
Hierarchical routing
Adaptive crankback schemes for hierarchical QoS routing in ATM networks 534
High-Speed Routing
Terabit switching: a survey of techniques and current products 547
Hit rates
Thin-client Web access patterns: Measurements from a cache-busting proxy 357
Honeynet
Intrusion detection techniques and approaches 1356
HSCSD
Single channel occupied voice and multi-channel occupied HSCSD over GSM 522
Hurst effects
Using autoregressive Gaussian processes with trends and aggregations to model self-similar traffic 964
Hybrid fiber coax
A novel mechanism for providing service differentiation over CATV network 1214
Hybrid scheme
A hybrid handover scheme for integrated networks 1263

IN/ISDN signaling platform
Performance evaluation using an approximation method for sojourn time distributions in an IN/ISDN signaling platform 1283
Injection limitation
A new injection limitation mechanism for wormhole networks 997
Input buffered switch
Design and analysis of enhanced Abacus switch 577
Input-buffered switches
Load balanced Birkhoff–von Neumann switches, part I: one-stage buffering 611
Instrumentation
Thin-client Web access patterns: Measurements from a cache-busting proxy 357
Integrated services (IntServ)
A review of quality of service mechanisms in IP-based networks — integrated and differentiated services, multi-layer switching, MPLS and traffic engineering 100
Intelligent network
ICALB: an integrated congestion avoidance and load balancing algorithm for distributed intelligent networks. Part I: description of ICALB 1548
ICALB: an integrated congestion avoidance and load balancing algorithm for distributed intelligent networks. Part II: Performance evaluation of ICALB 1564
Inter-domain management
The CORBA-based unified event management framework in multi-layer networks 254
Inter-domain network management system
BFRA: bounded flooding routing algorithm for provisioning the globally optimal route in a hierarchical ATM network 980
Interactive multimedia environments
Modeling with enhanced prioritized Petri nets: EP-nets 812
Interference
Call admission control for reducing dropped calls in CDMA cellular systems 689
Internet
Analytical modeling of primary and secondary load as induced by video applications using UDP/IP 1094
QUIPS-II: a simulation tool for the design and performance evaluation of Diffserv-based networks 1125
An efficient bandwidth management scheme for real-time Internet applications 1596

A performance study of RSVP with proposed extensions 1782
Internet protocol network
A new state space control scheme for Host-Gate Way Rate Control Protocol within intranets using ATM ABR service 1799
Internet service
Enabling fault resilience for web services 198
Internet topology
A novel cache distribution heuristic algorithm for a mesh of caches and its performance evaluation 329
Intranet
Automated design of hierarchical intranets 1066
Intranets
A new state space control scheme for Host-Gate Way Rate Control Protocol within intranets using ATM ABR service 1799
Intrusion detection
Intrusion detection techniques and approaches 1356
Intrusion detection with mobile agents 1392
Security architecture testing using IDS—a case study 1402
Intrusion detection system
Building agents for rule-based intrusion detection system 1366
IP over ATM
An implementation for ATM Adaptation Layer 5 1103
IP routing
High-performance IP routing table lookup 303
IP switching
Input queued switches for variable length packets: analysis for Poisson and self-similar traffic 590
Irreversible Markov chain
Performance analysis of alternate routing with trunk reservation in multirate switched networks 1665
ITU-T Z500 standard
Conformance testing to real-time communications systems 32

JAIN
Current status and future directions of software architectures for telecommunications 121
Java
Design and implementation of a distributed computing environment model for object-oriented networks programming 516
Jini
Current status and future directions of software architectures for telecommunications 121

Label switching
Virtual private dial-up services over multi-protocol label switching networks 884
Lagrangian techniques
An efficient algorithm for finding a path subject to two additive constraints 225
Large-scale networks
An intelligent routing and CAC framework for large-scale networks based on cooperative agents 1429
Latency
Low-latency guaranteed-rate scheduling using Elastic Round Robin 1315
Layer-4
A flow caching mechanism for fast packet forwarding 1257
Leaky bucket
Packet multiplexers with adversarial regulated traffic 239
Learning algorithms
Network resource brokerage by means of distributed agent-based systems encompassing reinforcement learning schemes 1415
Learning from experience
Retailer selection in future open competitive communications environments 662
Lightpath
Static lightpath establishment in WDM networks — New ILP formulations and heuristic algorithms 109
Linear controller
Design of a new globally stable explicit rate controller for ABR service with saturation 772
Linear-bounded arrival process
Token bucket characterization of long-range dependent traffic 1009
0–1 Linear programming
Retailer selection in future open competitive communications environments 662
Linux platform
Building agents for rule-based intrusion detection system 1366
LLC
Effect of TCP/LLC protocol interaction in GPRS networks 501
Load balance
Channel-sharing strategies in two-tier cellular PCS systems 1333
Load balancing
The Trickle-Down Effect: Web Caching and Server Request Distribution 345
Load balanced Birkhoff–von Neumann switches, part I: one-stage buffering 611
Load balanced Birkhoff–von Neumann switches, part II: multi-stage buffering 623
ICALB: an integrated congestion avoidance and load balancing algorithm for distributed intelligent networks. Part I: description of ICALB 1548
ICALB: an integrated congestion avoidance and load balancing algorithm for distributed intelligent networks. Part II: Performance evaluation of ICALB 1564
Load transformation
Analytical modeling of primary and secondary load as induced by video applications using UDP/IP 1094
Local area networks
Scheduling algorithms for multiple channel wireless local area networks 1305
Location database
A Track-Presetting strategy in PCS using hierarchical location databases 1727

Location management
A built-in memory model for reducing location update cost in mobile wireless networks 1343
Evaluating location management schemes for third generation mobile networks 1711
Location update
Evaluating location management schemes for third generation mobile networks 1711
Location-aware protocols
Dynamic channel allocation with location awareness for multi-hop mobile ad hoc networks 676
Logical topology design
Design of survivable WDM networks for carrying ATM traffic 485
Lognormal models
Thin-client Web access patterns: Measurements from a cache-busting proxy 357
Long-range dependence
Using autoregressive Gaussian processes with trends and aggregations to model self-similar traffic 964
Long-term prefetching
The potential costs and benefits of long-term prefetching for content distribution 367
Loss differentiation
Packet scheduling with delay and loss differentiation 21
Low earth orbit satellite
Performance analysis of multicast algorithms for mobile satellite communication networks 1085
LRU stack distance
Thin-client Web access patterns: Measurements from a cache-busting proxy 357

Markov reward models
Call admission control for reducing dropped calls in CDMA cellular systems 689
Matrix-geometric solutions
Performance evaluation using an approximation method for sojourn time distributions in an IN/ISDN signaling platform 1283
MD5
Replica-aware caching for Web proxies 183
MDP
Adaptive crankback schemes for hierarchical QoS routing in ATM networks 534
Measurement
Hop-by-hop versus end-to-end active measurements 954
Media access control
Performance analysis for voice/data integration on a CDMA-based wireless system 905
Medium access control
Dynamic channel allocation with location awareness for multi-hop mobile ad hoc networks 676
Medium access control protocol
TRAP: a high performance protocol for wireless local area networks 1058
Minimum-filtering
Hop-by-hop versus end-to-end active measurements 954
Misuse detection
Design and implementation of a decentralized prototype system for detecting distributed attacks 1374
Mobile ad hoc network
Dynamic channel allocation with location awareness for multi-hop mobile ad hoc networks 676
SOM: spiral-fat-tree-based on-demand multicast protocol in a wireless ad-hoc network 1684
Mobile agent technology
Realization of a secure active and programmable network infrastructure via mobile agent technology 1465
Mobile agents
Intrusion detection with mobile agents 1392
Mobile communications
Temporal difference method-based multi-step ahead prediction of long term deep fading in mobile networks 1477
Mobile computing
A reliable asynchronous RPC architecture for wireless networks 1631
SOM: spiral-fat-tree-based on-demand multicast protocol in a wireless ad-hoc network 1684
Mobile IP
Improving TCP handoff performance in Mobile IP based networks 635
Performance analysis of multicast algorithms for mobile satellite communication networks 1085
Mobile networking
An efficient multiple-path routing protocol for ad hoc networks 478
Mobile networks
MCoRe: an adaptive scheme for rerouting multicast connections in mobile ATM networks 56
A tabu search approach for assigning cells to switches in cellular mobile networks 464
A built-in memory model for reducing location update cost in mobile wireless networks 1343
Evaluating location management schemes for third generation mobile networks 1711
Mobile user
Virtual private dial-up services over multi-protocol label switching networks 884
Mobile wireless networks
Investigating the performance of TCP in mobile ad hoc networks 1132
Mobility
Performance analysis of a PCS network with state dependent calls arrival processes and impatient calls 507
Mobility-dependent call admission control in hierarchical cellular networks 700
Performance analysis of multicast algorithms for mobile satellite communication networks 1085
Mobility management
A built-in memory model for reducing location update cost in mobile wireless networks 1343
Modeling and simulation
An implementation for ATM Adaptation Layer 5 1103
Modified Elman neural network
Temporal difference method-based multi-step ahead prediction of long term deep fading in mobile networks 1477

Movable boundary
Performance analysis for voice/data integration on a CDMA-based wireless system 905
MPLS (multi-protocol label switching)
A review of quality of service mechanisms in IP-based networks — integrated and differentiated services, multi-layer switching, MPLS and traffic engineering 100
Multi-hop networks
Infrastructure-based routing in wireless mobile ad hoc networks 210
Multi-later switching
A review of quality of service mechanisms in IP-based networks — integrated and differentiated services, multi-layer switching, MPLS and traffic engineering 100
Multi-protocol label switching
Non-greedy minimum interference routing algorithm for bandwidth-guaranteed flows 1640
Multi-stage switches
Load balanced Birkhoff–von Neumann switches, part II: multi-stage buffering 623
Multi-step ahead prediction
Temporal difference method-based multi-step ahead prediction of long term deep fading in mobile networks 1477
Multicast
MCoRe: an adaptive scheme for rerouting multicast connections in mobile ATM networks 56
Dynamical grouping model for distributed real time causal ordering 288
MAMCRA: a constrained-based multicast routing algorithm 802
SOM: spiral-fat-tree-based on-demand multicast protocol in a wireless ad-hoc network 1684
Multicast adaptive multiple constraints routing algorithm
MAMCRA: a constrained-based multicast routing algorithm 802
Multicast communications
A fast and efficient heuristic algorithm for the delay- and delay variation-bounded multicast tree problem 825
Multicast routing
Real-time optimal multicast routing 1297
A distributed routing and wavelength assignment algorithm for real-time multicast in WDM networks 1527
A new approach for delay-constrained routing 1751
Multicast tree
QoS-driven multicast tree generation using Tabu search 1140
Multicasting
Load balanced Birkhoff–von Neumann switches, part II: multi-stage buffering 623
Fair flow control for ATM-ABR multipoint connections 741
Token-tray/weighted queuing-time (TT/WQT): an adaptive batching policy for near video-on-demand system 890
Performance analysis of multicast algorithms for mobile satellite communication networks 1085
Multihop networks
A note on dependable real-time communication in multihop networks 1673
Multilayer simulation
A methodology for developing simulation models of ATM networks in SDL language 265
Multimedia
An implementation for ATM Adaptation Layer 5 1103
Multimedia application
Dynamical grouping model for distributed real time causal ordering 288
Multimedia communication
Causally ordered delivery of multimedia objects 437
Multimedia-authoring
Modeling with enhanced prioritized Petri nets: EP-nets 812
Multiobjective optimisation
Aggregated bandwidth allocation: investigation of performance of classical constrained and genetic algorithm based optimisation techniques 1443
Multiple power levels
Power level selection schemes to improve throughput and stability of slotted ALOHA under heavy load 1719
Multipoint communications
Multipoint communications with speech mixing over IP network 46
Multipriorities and multimedia synchronization
Modeling with enhanced prioritized Petri nets: EP-nets 812
Multiprotocol label switching
Aggregated bandwidth allocation: investigation of performance of classical constrained and genetic algorithm based optimisation techniques 1443
Multirate services
Performance analysis of alternate routing with trunk reservation in multirate switched networks 1665
Multirate switching
Split-connection rearrangeably nonblocking operation of three-stage multirate Clos networks 1584

Near video-on-demand
Token-tray/weighted queuing-time (TT/WQT): an adaptive batching policy for near video-on-demand system 890
NetCache
A novel cache distribution heuristic algorithm for a mesh of caches and its performance evaluation 329
Network calculus
Resource allocation rules for providing performance guarantees to traffic aggregates in a DiffServ environment 846
Network lifetime
Crash faults identification in wireless sensor networks 1273
Network modelling
A methodology for developing simulation models of ATM networks in SDL language 265
Network monitoring
The CORBA-based unified event management framework in multi-layer networks 254
Network QoS
Decoupling different time scales of network QoS systems 1047

Network security
Design and implementation of a decentralized prototype system for detecting distributed attacks 1374
An intensive survey of fair non-repudiation protocols 1606
New call blocking probability
Mobility-dependent call admission control in hierarchical cellular networks 700
Nomadic user support
Realization of a secure active and programmable network infrastructure via mobile agent technology 1465
Non-repudiation
An intensive survey of fair non-repudiation protocols 1606
Nonlinear controller
Design of a new globally stable explicit rate controller for ABR service with saturation 772

Object-oriented network programming
Design and implementation of a distributed computing environment model for object-oriented networks programming 516
OMG notification service
The CORBA-based unified event management framework in multi-layer networks 254
On demand multicast routing protocol
Performance analysis of multicast algorithms for mobile satellite communication networks 1085
ON–OFF sources
A cell loss upper bound for heterogeneous ON–OFF sources with application to connection admission control 1172
One-way delay
Hop-by-hop versus end-to-end active measurements 954
OPNET
ABR traffic management using minimal resource allocation (neural) networks 9
Optical buffer
Architectural evolution and principles of optical terabit packet switches (OTPS) 557
Optical cross-connects
GORA: an algorithm for designing optical cross-connect nodes with improved dependability 1454
Optical interconnection networks
Architectural evolution and principles of optical terabit packet switches (OTPS) 557
Optical network
Traffic grooming in unidirectional WDM ring networks using genetic algorithms 1185
Optical networks
GORA: an algorithm for designing optical cross-connect nodes with improved dependability 1454
Optimal replication strategies
Object replication strategies in content distribution networks 376
Optimization
Automated design of hierarchical intranets 1066
QoS-driven multicast tree generation using Tabu search 1140
OVSF codes
Data rate improvement with dynamic reassignment of spreading codes for DS-CDMA 1575

Packet buffering
Improving TCP handoff performance in Mobile IP based networks 635
Packet classification
A flow caching mechanism for fast packet forwarding 1257
Packet forwarding
A flow caching mechanism for fast packet forwarding 1257
Packet loss probability
Joint call admission control/congestion control for wireless integrated voice/data networks 1653
Packet scheduling
Packet scheduling with delay and loss differentiation 21
Packet scheduling discipline
A multi-class probabilistic priority scheduling discipline for differentiated services networks 1487
Packet-by-packet generalized processor sharing
Performance evaluation of resource reservation and call admission policies for deterministic services in PGPS-based packet networks 1513
Parallel router
A scalable parallel internet router that enables the QoS through merging ATM with IPv6 647
Partial caching
Joint server scheduling and proxy caching for video delivery 413
Path computation
Dynamic transition matrix generation for topology aggregation 1497
Path rerouting
Rerouting for handoff based on the distance in wireless ATM networks 1162
Path selection
An efficient algorithm for finding a path subject to two additive constraints 225
Minimizing re-routing in MPLS networks with preemption-aware constraint-based routing 1076
PCS network with impatient call
Performance analysis of a PCS network with state dependent calls arrival processes and impatient calls 507
Peer-to-peer networks
Object replication strategies in content distribution networks 376
Performance analysis
TCP performance analysis and optimization over DMT based ADSL system 322
Load balanced Birkhoff–von Neumann switches, part I: one-stage buffering 611
Performance bounds
Load balanced Birkhoff–von Neumann switches, part II: multi-stage buffering 623
Performance evaluation
Infrastructure-based routing in wireless mobile ad hoc networks 210

A new injection limitation mechanism for wormhole networks 997
TRAP: a high performance protocol for wireless local area networks 1058
An implementation for ATM Adaptation Layer 5 1103
QUIPS-II: a simulation tool for the design and performance evaluation of Diffserv-based networks 1125
Performance evaluation of a Linux DiffServ implementation 1195
A hybrid handover scheme for integrated networks 1263

Performance thresholds
Bandwidth allocation in a multiservice satellite network based on long-term weather forecast scenarios 1037

Personal Communication Services
A Track-Presetting strategy in PCS using hierarchical location databases 1727

Personal communication system
Channel-sharing strategies in two-tier cellular PCS systems 1333

Personal wireless communications
Trends in personal wireless data communications 84

PIM-SM
RPIM-SM: extending PIM-SM for RP relocation 1774

Pipe
An efficient bandwidth management scheme for real-time Internet applications 1596

Pipeline technique
High-performance IP routing table lookup 303

PNNI
Adaptive crankback schemes for hierarchical QoS routing in ATM networks 534
A QoS-based routing algorithm for PNNI ATM networks 714

Popularity
The Cyclone Server Architecture: streamlining delivery of popular content 403

Prediction
Predictive flow control for TCP-friendly end-to-end real-time video on the Internet 1230

Prefetch threshold
The potential costs and benefits of long-term prefetching for content distribution 367

Premature/late arriving token
Modeling with enhanced prioritized Petri nets: EP-nets 812

Premium services
An efficient bandwidth management scheme for real-time Internet applications 1596

Price coordination
Optimization network flow control and price coordination with feedback: proposal of a new distributed algorithm 1028

Priority
Minimizing re-routing in MPLS networks with preemption-aware constraint-based routing 1076

Probe technique
Intrusion detection techniques and approaches 1356

Programmable networks
An extension of the *ns* simulator for active network research 189

Proportional differentiated services
A multi-class probabilistic priority scheduling discipline for differentiated services networks 1487

Protocol
A hybrid handover scheme for integrated networks 1263

Protocol engineering
Conformance testing to real-time communications systems 32

Protocol interference
Effect of TCP/LLC protocol interaction in GPRS networks 501

Protocol simulation
An extension of the *ns* simulator for active network research 189

Proxy
Replica-aware caching for Web proxies 183

QoS (quality of service)
An efficient bandwidth reservation and call admission control scheme for wireless mobile networks 74
Trends in personal wireless data communications 84
A review of quality of service mechanisms in IP-based networks — integrated and differentiated services, multi-layer switching, MPLS and traffic engineering 100
Infrastructure-based routing in wireless mobile ad hoc networks 210
A scalable parallel internet router that enables the QoS through merging ATM with IPv6 647
A QoS-based routing algorithm for PNNI ATM networks 714
MAMCRA: a constrained-based multicast routing algorithm 802
Resource allocation rules for providing performance guarantees to traffic aggregates in a DiffServ environment 846
Effect of delay and delay jitter on voice/video over IP 863
Weighted fair discard scheme for buffer management in the presence of network congestion 944
Call admission control for voice and data traffic in wireless communications 972
An implementation for ATM Adaptation Layer 5 1103
An applied research study for the provision of a QoS-oriented environment for voice and video services over satellite networks 1113
Bandwidth degradation QoS provisioning for adaptive multimedia in wireless/mobile networks 1153
A cell loss upper bound for heterogeneous ON–OFF sources with application to connection admission control 1172
Performance evaluation of a Linux DiffServ implementation 1195
An efficient bandwidth management scheme for real-time Internet applications 1596

A new approach for delay-constrained routing 1751
QoS routing
An efficient algorithm for finding a path subject to two additive constraints 225
QoS-driven multicast tree generation using Tabu search 1140
Non-greedy minimum interference routing algorithm for bandwidth-guaranteed flows 1640
Quality-of-service guarantees
Packet multiplexers with adversarial regulated traffic 239

Rain probability
Bandwidth allocation in a multiservice satellite network based on long-term weather forecast scenarios 1037
Random access
Single channel occupied voice and multi-channel occupied HSCSD over GSM 522
Random early detection
A linear system analysis of RED 1736
Multi-level active queue management with dynamic thresholds 756
Random selection
Power level selection schemes to improve throughput and stability of slotted ALOHA under heavy load 1719
Randomly addressed polling
TRAP: a high performance protocol for wireless local area networks 1058
RBF network
ABR traffic management using minimal resource allocation (neural) networks 9
Real Traffic Cell Flow Processing
A simple ER identification with congestion avoidance (SERICA) algorithm to support some TCP differentiated services over the ABR traffic 445
Real-time communication
A note on dependable real-time communication in multihop networks 1673
Real-time multicast routing
Real-time optimal multicast routing 1297
Real-time system
Conformance testing to real-time communications systems 32
Rearrangeably nonblocking routing
Split-connection rearrangeably nonblocking operation of three-stage multirate Clos networks 1584
Relative differentiated services
A multi-class probabilistic priority scheduling discipline for differentiated services networks 1487
Reliable multicast
Optimal branching factor for tree-based reliable multicast protocols 1018
Relocation
RPIM-SM: extending PIM-SM for RP relocation 1774
Remote procedure call
A reliable asynchronous RPC architecture for wireless networks 1631
Rendezvous point
RPIM-SM: extending PIM-SM for RP relocation 1774
Reno
Performance comparison between TCP Reno and TCP Vegas 1765
Replica
Replica-aware caching for Web proxies 183
Replica placement algorithms
Topology-informed Internet replica placement 384
Request batching
Token-tray/weighted queuing-time (TT/WQT): an adaptive batching policy for near video-on-demand system 890
Request distribution
The Trickle-Down Effect: Web Caching and Server Request Distribution 345
Resource allocation
Packet multiplexers with adversarial regulated traffic 239
Resource management
The globe infrastructure directory service 835
Resource reservation
Performance evaluation of resource reservation and call admission policies for deterministic services in PGPS-based packet networks 1513
Resource ReSerVation Protocol
A performance study of RSVP with proposed extensions 1782
Resource-based routing
Performance evaluation of resource reservation and call admission policies for deterministic services in PGPS-based packet networks 1513
Restoration
A restoration method independent of failure location in all-optical networks 915
Restoration network design
Design of survivable WDM networks for carrying ATM traffic 485
Restrictive cost
Dynamic transition matrix generation for topology aggregation 1497
Retailer
Retailer selection in future open competitive communications environments 662
Round-trip time
A performance prediction model for FECN rate-based flow control in ATM networks: a case study 1323
Router fanout
Topology-informed Internet replica placement 384
Routers
Terabit switching: a survey of techniques and current products 547
Routing
Infrastructure-based routing in wireless mobile ad hoc networks 210
A QoS-based routing algorithm for PNNI ATM networks 714
MAMCRA: a constrained-based multicast routing algorithm 802
Minimizing re-routing in MPLS networks with preemption-aware constraint-based routing 1076
Network resource brokerage by means of distributed agent-based systems encompassing reinforcement learning schemes 1415

Routing and wavelength assignment
A distributed routing and wavelength assignment algorithm for real-time multicast in WDM networks 1527
Routing Products
Terabit switching: a survey of techniques and current products 547
Routing protocols
Investigating the performance of TCP in mobile ad hoc networks 1132
Routing Table Search Algorithms
Terabit switching: a survey of techniques and current products 547
RPIM-SM
RPIM-SM: extending PIM-SM for RP relocation 1774

Satellite communications
Bandwidth allocation in a multiservice satellite network based on long-term weather forecast scenarios 1037
Satellite networks
An applied research study for the provision of a QoS-oriented environment for voice and video services over satellite networks 1113
Scanning
Intrusion detection techniques and approaches 1356
Scheduling
Load balanced Birkhoff–von Neumann switches, part I: one-stage buffering 611
Load balanced Birkhoff–von Neumann switches, part II: multi-stage buffering 623
Scheduling algorithms
Scheduling algorithms for multiple channel wireless local area networks 1305
Scheduling discipline
A probabilistic priority scheduling discipline for multi-service networks 1243
Scope overlapping
Optimal branching factor for tree-based reliable multicast protocols 1018
Security
Realization of a secure active and programmable network infrastructure via mobile agent technology 1465
Security perimeter
Security architecture testing using IDS—a case study 1402
Security protocols
An intensive survey of fair non-repudiation protocols 1606
Segmentation and Reassembly
An implementation for ATM Adaptation Layer 5 1103
Self-similar
Using autoregressive Gaussian processes with trends and aggregations to model self-similar traffic 964
Self-similar traffic
Input queued switches for variable length packets: analysis for Poisson and self-similar traffic 590
Sensor networks
Crash faults identification in wireless sensor networks 1273
SERICA
A simple ER identification with congestion avoidance (SERICA) algorithm to support some TCP differentiated services over the ABR traffic 445
Server scheduling
Joint server scheduling and proxy caching for video delivery 413
Service architecture
Retailer selection in future open competitive communications environments 662
Service differentiation
A novel mechanism for providing service differentiation over CATV network 1214
A probabilistic priority scheduling discipline for multi-service networks 1243
Service provider
Network resource brokerage by means of distributed agent-based systems encompassing reinforcement learning schemes 1415
Service revenue
Token-tray/weighted queuing-time (TT/WQT): an adaptive batching policy for near video-on-demand system 890
Short- and long-memory process
Token bucket characterization of long-range dependent traffic 1009
Shortest path
QoS-driven multicast tree generation using Tabu search 1140
SLA
Joint server scheduling and proxy caching for video delivery 413
Soft guard channel
Call admission control for reducing dropped calls in CDMA cellular systems 689
Software architecture
Current status and future directions of software architectures for telecommunications 121
Software component
Design and implementation of a distributed computing environment model for object-oriented networks programming 516
Sojourn time distribution
Performance evaluation using an approximation method for sojourn time distributions in an IN/ISDN signaling platform 1283
Specification and description language
A methodology for developing simulation models of ATM networks in SDL language 265
Spectral efficiency
Data rate improvement with dynamic reassignment of spreading codes for DS-CDMA 1575
Speech scheduling and mixing system
Multipoint communications with speech mixing over IP network 46
Spreading factor
Data rate improvement with dynamic reassignment of spreading codes for DS-CDMA 1575
Stability
Load balanced Birkhoff–von Neumann switches, part I: one-stage buffering 611

Power level selection schemes to improve throughput and stability of slotted ALOHA under heavy load 1719

Statistical multiplexing
Packet multiplexers with adversarial regulated traffic 239

Steiner
MAMCRA: a constrained-based multicast routing algorithm 802

Stochastic reward net
Call admission control for reducing dropped calls in CDMA cellular systems 689

Streaming media
Joint server scheduling and proxy caching for video delivery 413

Streaming media delivery
An interactive video delivery and caching system using video summarization 424

Success function
Thin-client Web access patterns: Measurements from a cache-busting proxy 357

Switch architecture
Design and analysis of enhanced Abacus switch 577

Synchronization protocol
Dynamical grouping model for distributed real time causal ordering 288

Synthesis
Automated design of hierarchical intranets 1066

Tabu search
A tabu search approach for assigning cells to switches in cellular mobile networks 464
QoS-driven multicast tree generation using Tabu search 1140

Task assignment
A fast algorithm for reliability-oriented task assignment in a distributed system 1622

TCP
The Cyclone Server Architecture: streamlining delivery of popular content 403
Effect of TCP/LLC protocol interaction in GPRS networks 501
Improving TCP handoff performance in Mobile IP based networks 635
Investigating the performance of TCP in mobile ad hoc networks 1132
A linear system analysis of RED 1736

TCP applications
A simple ER identification with congestion avoidance (SERICA) algorithm to support some TCP differentiated services over the ABR traffic 445

TCP rate control
TCP rate control with dynamic buffer sharing 922

TCP-friendly
Predictive flow control for TCP-friendly end-to-end real-time video on the Internet 1230

TCP/IP
An applied research study for the provision of a QoS-oriented environment for voice and video services over satellite networks 1113

TDMA
TRAP: a high performance protocol for wireless local area networks 1058

Telecommunications
Current status and future directions of software architectures for telecommunications 121

Telecommunications information networking architecture
Retailer selection in future open competitive communications environments 662

Temporal difference method
Temporal difference method-based multi-step ahead prediction of long term deep fading in mobile networks 1477

Terabit packet switches
Architectural evolution and principles of optical terabit packet switches (OTPS) 557

Terabit Routers
Terabit switching: a survey of techniques and current products 547

Terabit switching
Design and analysis of enhanced Abacus switch 577

Three-stage Clos networks
Split-connection rearrangeably nonblocking operation of three-stage multirate Clos networks 1584

Throughput
Optimal branching factor for tree-based reliable multicast protocols 1018
Power level selection schemes to improve throughput and stability of slotted ALOHA under heavy load 1719

Time complexity
A fast and efficient heuristic algorithm for the delay- and delay variation-bounded multicast tree problem 825

Time scales
Decoupling different time scales of network QoS systems 1047

Time series
Temporal difference method-based multi-step ahead prediction of long term deep fading in mobile networks 1477

TINA
Current status and future directions of software architectures for telecommunications 121

TMN
Current status and future directions of software architectures for telecommunications 121

Token buckets
Token bucket characterization of long-range dependent traffic 1009

Topology aggregation
Dynamic transition matrix generation for topology aggregation 1497

Tornado codes
The Cyclone Server Architecture: streamlining delivery of popular content 403

Traditional Markov analysis
Performance analysis for voice/data integration on a CDMA-based wireless system 905

Traffic
A performance study of RSVP with proposed extensions 1782
Traffic channel
Single channel occupied voice and multi-channel occupied HSCSD over GSM 522
Traffic dispersion
A note on dependable real-time communication in multihop networks 1673
Traffic engineering
A review of quality of service mechanisms in IP-based networks — integrated and differentiated services, multi-layer switching, MPLS and traffic engineering 100
Minimizing re-routing in MPLS networks with preemption-aware constraint-based routing 1076
Analytical modeling of primary and secondary load as induced by video applications using UDP/IP 1094
Traffic grooming problem
Traffic grooming in unidirectional WDM ring networks using genetic algorithms 1185
Traffic management
A methodology for developing simulation models of ATM networks in SDL language 265
A simple ER identification with congestion avoidance (SERICA) algorithm to support some TCP differentiated services over the ABR traffic 445
A new state space control scheme for Host-Gate Way Rate Control Protocol within intranets using ATM ABR service 1799
Traffic routing
Optimization network flow control and price coordination with feedback: proposal of a new distributed algorithm 1028
Transient fluid analysis
Performance analysis for voice/data integration on a CDMA-based wireless system 905
Transition matrix
Dynamic transition matrix generation for topology aggregation 1497
Transmission control protocol
TCP performance analysis and optimization over DMT based ADSL system 322
Tree
MAMCRA: a constrained-based multicast routing algorithm 802
Tree structure
Data rate improvement with dynamic reassignment of spreading codes for DS-CDMA 1575
True fully adaptive routing
A new injection limitation mechanism for wormhole networks 997
Truncated binary exponential backoff
A novel mechanism for providing service differentiation over CATV network 1214
Trunk reservation
Performance analysis of alternate routing with trunk reservation in multirate switched networks 1665
TTL
Optimal branching factor for tree-based reliable multicast protocols 1018
Two-tier cellular system
Channel-sharing strategies in two-tier cellular PCS systems 1333

UMTS
Trends in personal wireless data communications 84
URL hashing
The Trickle-Down Effect: Web Caching and Server Request Distribution 345
User loss
Token-tray/weighted queuing-time (TT/WQT): an adaptive batching policy for near video-on-demand system 890
User reneging
Token-tray/weighted queuing-time (TT/WQT): an adaptive batching policy for near video-on-demand system 890

Validation
A performance prediction model for FECN rate-based flow control in ATM networks: a case study 1323
Variable length packet switches
Input queued switches for variable length packets: analysis for Poisson and self-similar traffic 590
VBR video
The transportation of VBR-encoded video using deterministic characterization and bandwidth renegotiation 731
Vegas
Performance comparison between TCP Reno and TCP Vegas 1765
Video communication
Analytical modeling of primary and secondary load as induced by video applications using UDP/IP 1094
Video communications
The transportation of VBR-encoded video using deterministic characterization and bandwidth renegotiation 731
Video over IP
Effect of delay and delay jitter on voice/video over IP 863
Virtual path
Aggregated bandwidth allocation: investigation of performance of classical constrained and genetic algorithm based optimisation techniques 1443
Virtual private network
Virtual private dial-up services over multi-protocol label switching networks 884
Voice and data traffic
Call admission control for voice and data traffic in wireless communications 972
Voice over IP
Effect of delay and delay jitter on voice/video over IP 863

Water-filling
TCP performance analysis and optimization over DMT based ADSL system 322

Wavelength assignment
Static lightpath establishment in WDM networks — New ILP formulations and heuristic algorithms 109
Wavelength division multiplexing
Design of survivable WDM networks for carrying ATM traffic 485
Architectural evolution and principles of optical terabit packet switches (OTPS) 557
A restoration method independent of failure location in all-optical networks 915
Traffic grooming in unidirectional WDM ring networks using genetic algorithms 1185
Wavelength division multiplexing networks
A distributed routing and wavelength assignment algorithm for real-time multicast in WDM networks 1527
Wavelength routing
Static lightpath establishment in WDM networks — New ILP formulations and heuristic algorithms 109
Wavelength-graph
Static lightpath establishment in WDM networks — New ILP formulations and heuristic algorithms 109
Wavelength-routed optical networks
Design of survivable WDM networks for carrying ATM traffic 485
WDM
Static lightpath establishment in WDM networks — New ILP formulations and heuristic algorithms 109
Web caching
The potential costs and benefits of long-term prefetching for content distribution 367
An interactive video delivery and caching system using video summarization 424
Web proxy cache
The Trickle-Down Effect: Web Caching and Server Request Distribution 345
Web site replication
The globe infrastructure directory service 835
Webserver
The Cyclone Server Architecture: streamlining delivery of popular content 403
WebTV
Thin-client Web access patterns: Measurements from a cache-busting proxy 357
Weighted fairness
Weighted fair discard scheme for buffer management in the presence of network congestion 944
Wireless ATM
Performance analysis of wireless ATM/AAL2 over a burst error channel 1
Rerouting for handoff based on the distance in wireless ATM networks 1162
A genetic algorithm for solving dual-homing cell assignment problem of the two-level wireless ATM network 1536
Wireless cellular networks
An efficient bandwidth reservation and call admission control scheme for wireless mobile networks 74
Wireless communication
Dynamic channel allocation with location awareness for multi-hop mobile ad hoc networks 676
Wireless communications
Call admission control for voice and data traffic in wireless communications 972
Wireless LANs
CSMA/CA performance under high traffic conditions: throughput and delay analysis 313
TRAP: a high performance protocol for wireless local area networks 1058
Wireless local area network
Trends in personal wireless data communications 84
Wireless mobile ad hoc communications
Infrastructure-based routing in wireless mobile ad hoc networks 210
Wireless mobile infrastructure
Infrastructure-based routing in wireless mobile ad hoc networks 210
Wireless networks
Crash faults identification in wireless sensor networks 1273
Scheduling algorithms for multiple channel wireless local area networks 1305
A reliable asynchronous RPC architecture for wireless networks 1631
SOM: spiral-fat-tree-based on-demand multicast protocol in a wireless ad-hoc network 1684
Wireless systems
A built-in memory model for reducing location update cost in mobile wireless networks 1343
Workload characterization
Thin-client Web access patterns: Measurements from a cache-busting proxy 357
Analytical modeling of primary and secondary load as induced by video applications using UDP/IP 1094
World Wide Web (www)
Replica-aware caching for Web proxies 183
A novel cache distribution heuristic algorithm for a mesh of caches and its performance evaluation 329
Thin-client Web access patterns: Measurements from a cache-busting proxy 357
CDN brokering 393
Worm/virus attack
Intrusion detection techniques and approaches 1356
Wormhole networks
A new injection limitation mechanism for wormhole networks 997
Wormhole switching
A new injection limitation mechanism for wormhole networks 997
Worst-case sources
Packet multiplexers with adversarial regulated traffic 239
WWW
Enabling fault resilience for web services 198

xDSL networks
Accurate bandwidth measurement in xDSL service networks 1699

Zipf
The Trickle-Down Effect: Web Caching and Server Request Distribution 345
